

Guidance Cues in the Developing Brain

Filesize: 5.94 MB

Reviews

Absolutely essential study pdf. It is written in basic words and phrases rather than hard to understand. I am just happy to tell you that this is basically the finest pdf I actually have studied during my personal lifestyle and can be the very best publication for actually.

(Shyanne Senger)

GUIDANCE CUES IN THE DEVELOPING BRAIN

To get **Guidance Cues in the Developing Brain** PDF, please follow the link below and download the document or get access to additional information that are relevant to GUIDANCE CUES IN THE DEVELOPING BRAIN book.

Book Condition: New. Publisher/Verlag: Springer, Berlin | Many complex molecular interactions are involved in the development of the mammalian brain. Molecules serving as guidance cues for migratory cells, growing axons and for recognition of postsynaptic targets are a major topic for research because they are directly involved in the formation of neuronal circuits, thus creating the foundation for subsequent functional refinement through interactions with the environment. In addition, most guidance cue molecules are also involved in plasticity, damage repair and regeneration in the adult brain. This volume reviews current knowledge on major classes of molecules involved in: guidance of growing axons; tau proteins involved in the establishment of axonal polarity, outgrowth and contact recognition; gangliosides and lectins involved in neuronal migration, neurite outgrowth and contact recognition; and myelin molecules that inhibit nerve regeneration. | 'Complex Patterns and Simple Architects: Molecular Guidance Cues for Developing Axonal Pathways in the Telencephalon.- 1 Introduction.- 2 The Four Major Classes of Axonal Guidance Cues Are Netrins, Semaphorins, Slits, and Ephrins.- 2.1 Netrins Usually Function as Chemoattractants and Bind to Deleted in Colorectal Cancer and Neogenin.- 2.2 Semaphorins Act as Chemorepellents for Most and Chemoattractants for Some Axons and Bind to Neuropilins, Plexins, and L1.- 2.3 Slits Are Midline Repellents That Bind to Robo Receptors.- 2.4 Ephrins and Eph Receptor Tyrosine Kinases Are Involved in Bidirectional Signaling.- 3 Axonal Guidance Cues Display a Characteristic Spatio-Temporal Pattern of Expression in Embryonic and Fetal Zones of the Telencephalon.- 3.1 Proliferative Zones: The Ventricular Zone, the Subventricular Zone, and the Ganglionic Eminence.- 3.2 The Intermediate Zone: The Zone of Neuronal Migration and Axonal Growth.- 3.3 The Subplate Zone and Marginal Zone: Sites of the Earliest Synaptogenesis Between "Waiting" Axons and Transient Fetal Populations of Cells.- 3.4 The Cortical Plate: The Primordium of Future Cortical Layers II-VI.- 4 Guidance...
