Brand New Book ***** Print on Demand *****.Excerpt from The Foundations of Chemical Theory: The Elements of Physical and General Chemistry Modern chemistry presents a multitudinous array of facts. It could not be otherwise, since the science undertakes to describe more than eighty separate elements and the compounds they form, one with another. The exhibition of these facts, as set forth in a comprehensive textbook, whether of organic or inorganic chemistry, may well dazzle and bewilder the student, who will scarcely be likely to appreciate the beauty of the science, or the glamour of the human achievement of which it is the monument, if he is required laboriously to appropriate the facts without judicious selection and arrangement. Indeed, the complaint is often made by students that chemistry requires too much memory-work, and is therefore not so inspiring a science as physics, which deals all the while with fundamental principles, and properties of matter. Yet the facts of chemistry are the facts of nature, and nature is not chaotic. Consequently these accumulated facts present to the mind of man a powerful challenge. They must be...
