Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 Excerpt: .in the study of ore deposits as a result of microscopic study of rocks and ores. There is now an appreciation of the necessity of microscopic study and the unreliability of observations which are not supported by such testimony. In this connection it is well to refer to the recent application of metallographic methods of study to polished sections of ore. These methods of study are clearing up many points previously uncertain in the history of certain ore deposits and promise to be fully as important in future work on ore deposits as the study of thin sections has become to the petrographer. 4. Lindgren, in a paper on Physical Conditions and Ore Deposition, has made an important contribution to the literature of ore deposits. He shows clearly that there is an intimate relation between the mineral content of an ore deposit and the physical conditions under which the deposition occurred. He has shown that by a study of the mineral associations in an ore deposit it is possible to diagnose whether the deposit was formed under igneous conditions, pegmatitic conditions, contact metamorphic conditions, in the zone of cementation, in the zone of weathering, or under physical conditions which differ from all of these. In his text book on mineral deposits Lindgren has described ore deposits which were formed under each of the conditions mentioned above. 5. In the year 1904 a monumental work was published by Van Hise on the subject of metamorphism. In this..
