

## Fundamentals of Computation Theory

Filesize: 2.33 MB

### **Reviews**

*A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.*

*(Mitchell Kuhn III)*

## FUNDAMENTALS OF COMPUTATION THEORY

To save **Fundamentals of Computation Theory** eBook, remember to refer to the web link below and save the file or gain access to additional information which are have conjunction with FUNDAMENTALS OF COMPUTATION THEORY ebook.

Springer Aug 1981, 1981. Taschenbuch. Book Condition: Neu. 235x155x26 mm. This item is printed on demand - Print on Demand Titel. Neuware - Observability and Nerode equivalence in concrete categories.- Some universal algebraic and model theoretic results in computer science.- Probabilistic analysis of the performance of greedy strategies over different classes of combinatorial problems.- Moderately exponential bound for graph isomorphism.- An algebraic definition of attributed transformations.- Analogies of PAL and COPY.- Quasi-equational logic for partial algebras.- Homogeneity and completeness.- On the error correcting power of pluralism in inductive inference.- Equality languages and language families.- Extremal combinatorial problems in relational data base.- Specifying algebraic data types by domain equations.- An axiomatization of regular forests in the language of algebraic theories with iteration.- Fast recognition of rings and lattices.- A definition of the P = NP-problem in categories.- Generating graph languages using hypergraph grammars.- Lower bounds for problems defined by polynomial inequalities.- What is computable for abstract data types .- On strongly cube-free -words generated by binary morphisms.- On the role of selectors in selective substitution grammars.- Classes of functions over binary trees.- Mathematical structures underlying greedy algorithms.- Some properties of language families generated by commutative languages.- Isomorphism completeness for some algebraic structures.- Reducing algebraic tree grammars.- Rational cone and substitution.- On the regularity problem of SF-languages generated by minimal linear grammars.- Co-algebras as machines for the interpretations of flow diagrams.- Random access machines and straight-line programs.- On the LBA problem.- Dynamic algebras of programs.- The equivalence problem for LL- and LR-regular grammars.- Context-free languages of infinite words as least fixpoints.- Remarks on the notion of concurrency relation in the case of systems.- On the size of conjunctive representations of n-ary relations.- On subwords of formal languages.- First order dynamic logic with decidable proofs and workable model theory.- Elimination of second-order quantifiers...
