Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1836 Excerpt: . the radii of the circles directly, and the squares of the times inversely, also the squares of the times are as the cubes of the distances. When a body revolves in a circle by means of central forces, its actual velocity is the same as it would acquire by falling through half the radius by the constant action of the centripetal force. From these facts the following rules for central forces are derived. veloc. of rev. body  $2 \times$  weight of body  $5 \dots$  centri force. radius of circle of revolution  $\times 32$  velocity of revol. body  $8 \times$  weight of body centrifugal force  $\times 32$  of the circle of revolution. centrif. force  $\times 32 \times$  rad. circle  $7$ -veloc. of revolving body = we Sht of the re. volving body. rad. circle  $\times 32 \times$  centrifugal force weight  $) =$  velocity. 9. There will be no difficulty in applying what has been said to practice. There are two fly-wheels of the same weight, one of which is 10 feet diameter, and makes 6 revolutions in a minute; what must the diameter of the other be to revolve 3 times in a minute? Here  $68: 3:: 10: 2.5 =$  the diameter of the second. What is the centrifugal force of the rim of a fly-wheel, its diameter being 12 feet, and the weight of the rim 1 ton, making 65 turns in a minute?  $2 \times 3.1416 \times 65 = 40. M =$  the velocity in feet per second; hence,  $40 \dots$
